PROJECTS HANDLED

MAIN PROJECT

❖ Digital Image Authentication for Judiciary Systems

Digital images are now routinely introduced as evidence into courts of law. It has therefore, become critical to verify the integrity of this digital evidence. It is often desirable to determine if a digital image has been altered in any way from the time of its recording, including manipulations as simple as cropping. The JPEG file format has emerged as a universal image standard employed by nearly all commercial digital cameras. As such, in the details of this encoding scheme, and how these details vary among cameras of different make, model, resolution, and quality. Using image parameters,thumbnail parameters and Exif meta data parameters from an image jpeg header to detect the image authentication.
