Basic hardware repairing and servicing.

Basic software repairing and servicing.

Can troubleshoot and solve any of the technical related issues.

Studied Photoshop.

Innovative ideas.

Speed Typing.

Fluency in English.

Content creation.

Team player.

PROJECTS

E-mailer — *A client to handle multiple email accounts.*

This project was the main project I have done at the end of my BCA Degree. I was one of those people with too much email accounts across multiple platforms(gmail,yahoo,live,etc) and had to deal with all of them one by one, So i had the idea to create a simple program where you can login with a single password and username which will inturn auto-login to all your multiple accounts and makes it easier to access all the important mails. It was designed to be clutter-free and provide different tabs for different platforms, each tab sub-divided into write, inbox, sent, draft, spam. I used Netbeans IDE and Apache Tomcat server to setup an access to all your mails even without permanent Internet connection. I used SMTP to send and receive emails from and to the client.

Monstergaming Logo — *Designed an icon and logo with Photoshop.*

I designed a detailed logo from scratch using only Photoshop and a client icon for their gaming client on 2016.

Pie Chart Generator - *A Pie chart generating application*

Designed and coded in Java SE. This program uses external libraries to form a specific type of Pie Chart and save the chart as a image file in it's root directory. It was personally coded by me to be used in a programme at RITU'18 at Rajiv Gandhi Institute of technology, Kottayam.

DECLARATION

I do hereby declare that the information given herewith is correct to the extent of my knowledge.

Yours Sincerely,
Arun Krishnan
