5. Mucinous Cystadenoma with sarcomatous mural nodule in the ovary of a 36 year old female –8th IAPM (2010)

Thesis

The Study was titled “*Comparative study of paraffin embedded sputum and sputum smear cytology in the diagnosis of Bronchogenic Carcinoma*”

50 patients with clinical suspicion of bronchogenic carcinoma were enrolled for the study. During this study it was found that, paraffin embedded sputum study was twice as sensitive as sputum smear cytology in the diagnosis of Bronchogenic Carcinoma.
