DISSERTATION

TITLE: EVALUATION OF ORBITAL VOLEME IN UNILATERAL ORBITAL FRACTUREUSING COMPUTED TOMOGRAPHY

Our study was an observational and evolutional to analyze the significance of orbital volume calculation in predicting the probability or tendency of developing late enophthalmous on patients with unilateral orbital fracture with or without associated midface injury reported to Sri Ramakrishna Hospital and Sri Ramakrishna Dental College and Hospital. The subjects in our study included fifteen patients between 18 and 60 years. They were treated surgically and conservatively. Patients were exposed to series of examination from the day of injury or reporting for a consecutive period of up to six months following injury. CT was taken prior to treatment following management to evaluate the volume change in orbit. Its correlation and significance to treatment outcome were analyzed using MIMICS software by Materialise by comparing injured orbit to opposite side normal eye.

This dissertation is under work for publication.

LIBRARY DISSERTATION

TITLE: EXTRACTION OF ASYMPTOMATIC THIRD MOLARS INTEMPOROMANDIBULAR JOINT DISORDERS

CONFERENCE ATTENDED

1. Chapter, AOMSI, Hotel Kodai International, Kodaikanal, 12th – 14th June 2015.
