Professional Profile

I'm a dynamic, highly motivated and clinically competent doctor. Although I don't have NHS experience which is obviously desirable I'm confident that in a short time I would be able to understand the protocols and do my duties properly without any glitch.

I have been trained in such a way that I can deal with all kinds of stressful situations. One example that I can proudly quote at this moment is during my internship night shift in my surgical posting I had to take care of a female patient who had been brought to the emergency department with acute abdomen and on examining her vitals were collapsing and no history was known and while examining I suspected her to be having an internal abdominal bleeding and immediately informed the team and the patient was taken for immediate laparotomy and the patient was saved.

I was blessed to be part of a wonderful team that really played a major role in saving the patient's life. Hence, I can confidently say that I can work very well under pressure and in coordination of the team.

I was also very fortunate to get great clinical exposure in my college as well as my work place. I really want to start my job in UK from a place that would help me to grow as a good, safe and efficient doctor.

I'm a very optimistic individual and believe in facing all situation with a beautiful smile. I also have great communication skills and I believe that by being attentive to patient's issues we can ease their burden and gain their confidence and hence provide proper patient care.

I'm really hoping that I would be given a chance to give my services in your esteemed institution.

Responsibilities
