THE HR MANAGER

Dear Sir /Mam

I noticed the opening you have for a Dental technician at your esteemed , and I am highly interested in the position. I believe my past experiences and personal skills would translate wonderfully to the opportunity within your organization.

I obtain great joy by helping people get healthy and stay safe. Dentistry allows me to do this while utilizing some of my best skills as a worker. In addition, my attention to detail and organizational acumen would make me a vital addition to concern . I attended govt dental college at thiruvananthapuram to earn my dental Mechanic course . The time was extensive but worth every second. The program opened my eyes to what type of work ethic and desire is needed to succeed in this industry. Rather than scaring me away, it enticed me to work even harder to reach my goals.

After school, I began the process of immersing myself in the dental industry. I have a professional personal presentation and professional manners. fabricate, alter, or repair dental devices, such as dentures, crown, bridge's, inlays, cast partial and appliances for straightening teeth.

So everything we create is customised to perfectly match each individual patient

Sincerely,

Jegadeesh R
