## PROJECT

### Monitoring and Laboratory Diagnosis of Hyperthyroidism in Adults.

The study was done on patients who visited St. Thomas hospital, Chethipuzha during the period of May 1st 2021 to May 15th. In this study 35 adult patients {18-60 years} details were collected from their history and based on the biochemical values According to the gender in 35 patients, 21 (60%) female and 14 (40%) male and some patients are in treatment. During this study females are more prone to hyperthyroidism than males.
