BSc Computer Science , 6.8, 2018

📄 Project Details

Employees Tracking System

It has been developed on Java and MySQL. Employees tracking software makes it easy for the employer to keep track of records. You can check to see if there are duplicate employees in the database. Most of all, the employer can assign tasks to employees and assess their progress in order to keep track of employee performance. This system brings about an easy way of maintaining the details of employee working in any organization. 3 modules : Admin, Office Manager, Employees
Front-End - JAVA, Android, JSP, JS, jQuery
Back-End - MySQL server 5.0 Tools - Spring Tool Suite (STS), Android Studio

Period : 3 month Team Size: 3

Role : Team Lead

Marketing Management System

It has been developed on Java and MySQL. This is professional and easy to use tool. Marketing management system is a project developed for buying different products online. This project helps the users to buy any type of product online. Only the authorized users can be able to buy products by using this project. This project provides a unique username and password to the people who wants to do marketing.

For this the user needs to give his personal details. Marketing business like buying the product can be done from anywhere and at any time. User once registered to this site can view all the products.

3 modules: Admin, Manufacturers, Users
